I. INTRODUCTION

A. Background

This State Plan replaces all previous versions of the State of Hawaii EAS Plan. Henceforth this plan will be known as the Hawaii Statewide Alert & Warning System (SAWS) State Plan. It is produced by the State Emergency Communications Committee (SECC) which is a collaboration of Local Broadcasters, the National Weather Service, Hawaii Emergency Management Agency (HI-EMA), in coordination with the Federal Communications Commission.

Broadcasters, cable providers, and wireless cellular carriers are an integral component of the alert and warning dissemination to the public in preventing loss of life and minimizing property damage. This State Plan establishes guidelines and operating procedures for broadcasters in supporting alert and warning within the State of Hawaii.

This State Plan will be reviewed and amended as needed to incorporate changes from the FCC or local policies and procedures.

B. State Emergency Communications Committee (SECC)

The Hawaii SECC is a volunteer organization composed of Radio & TV/Cable Broadcasters, The Hawaii Association of Broadcasters, EAS Participants, emergency management officials, and other stakeholders.

- SECC Chair
Courtney Harrington harrington.courtney@gmail.com
- SECC Executive Committee Member (Radio/TV Broadcaster Representative)
Christopher S. Leonard chris@hawaiibroadcasters.com
- SECC Executive Committee Member (Cable Broadcaster Representative)
"Vacant"
- SECC Executive Committee Member (State Emergency Management Representative)
Ryan Hiraе ryan.j.hirae@hawaii.gov

The State Emergency Communications Committee shall convene:

- Annually in person
- Semiannually via teleconference
- After any major emergency and/or event that utilized the alert & warning system within this State Plan as deemed necessary. Participants may submit testimony during the after-action review.

C. Authority

1. FCC Title 47 of the Code of Federal Regulations (CFR)

Part 10 - Wireless Emergency Alerts

Part 11 – Emergency Alert System

2. Hawaii Revised Statutes

HRS 127A EMERGENCY MANAGEMENT

§127A-12 Emergency management powers, in general.

(5) Direct or control as may be necessary for emergency management:

(A) Alerts, warnings, notifications, activations, exercises, drills, and tests;

(B) Warnings and signals for alerts or exercises, and any type of warning device, system, or method to be used in connection therewith;

3. U.S. Department of Justice

(1) Law Enforcement Blue Alert, National Blue Alert Act of 2015

(2) Child Abduction Emergencies or AMBER Alert, Protect Act of 2003. MAILE-AMBER (CAE) Alert as reference in the State of Hawaii.

D. Overview of Hawaii Statewide Alert & Warning System

1. Integrated Public Alert and Warning System (IPAWS)

Federal and the State, Local, Tribal, Territorial (SLTT) alerting authorities can have the ability to use the Common Alerting Protocol (CAP) standards to activate alerts with the FEMA IPAWS-OPEN infrastructure. IPAWS allows public safety officials with an effective way to alert and warn the public about pending emergencies using the Emergency Alert System (EAS), Wireless Emergency Alerts (WEA), the National Oceanic and Atmospheric Administration (NOAA) Weather Radio, and other public alerting systems from a single interface. See Appendix D for IPAWS Diagram.

a) Emergency Alert System (EAS)

The Emergency Alert System is a national public warning system that requires TV and radio broadcasters, cable television systems, wireless cable systems, satellite digital audio radio service providers, direct broadcast satellite service providers and wireline video service providers to offer to the President the communications capability to address the American public during a national emergency. The system also may be used by state and local authorities to deliver important emergency information such as AMBER (missing children) alerts and emergency weather information targeted to a specific area.

b) Wireless Emergency Alert (WEA)

This system delivers critical alert & warnings information to the public on WEA enabled mobile wireless devices that have not been manually

opted out of the service by the user. The alerts appear like text messages on mobile wireless devices preceded by a special attention alert tone reserved for WEA. These alerts can also be sent out to a geographically targeted area. Participation by wireless providers is voluntary, but those that opt into this public safety service must adhere to the technical and operational requirements established by the FCC.

2. Live Audio Broadcast System (LABS)

May be used by emergency management authorities when public response is required. Live video broadcasts are disseminated statewide via the University of Hawaii (UH) Network. TV programmers may interrupt normal programming or cutaway periodically to display updated information. Broadcast TV stations are encouraged to acquire Institutional Television Fixed Service (ITFS) receivers enabling them to receive the live video broadcast feed from the State EOC and use it to supplement normal video programming. Emergency Management authorities will notify participating stations by closed circuit announcement that a message will be forthcoming at a scheduled time, usually within minutes.

- Oahu: Olelo via the ALS-PEG Network.
- Kauai: Hoike via analog fiber from Kauai Community College.
- Maui: Akaku via analog fiber from Maui Community College.
- Hawaii: NaLeo via IP multicast from UH Hilo.

3. Statewide Outdoor Siren System

The Statewide All-Hazard Outdoor Warning System for Public Safety can be used for Tsunamis (distant & local), Hurricanes, Evacuations for Lava, Brush Fires, Dam Breaks, and/or Terrorist/Enemy Attack. There are over 400 sirens across the state not including military and private sirens.

II. OPERATIONAL PROCEDURE

Important Contact Information

National Weather Service	808-973-5269
State Emergency Operations Center	808-733-4300
Oahu Emergency Operations Center	808-723-8960
Hilo Emergency Operations Center	808-935-0031
Maui Emergency Operations Center	808-270-7285
Kauai Emergency Operations Center	808-241-1800

A. Activation

The State of Hawaii EAS Network will be activated under one of the following circumstances:

1. National Level

Initiated upon receipt of an Emergency Action Notification (EAN) released at the national level. The notification consists of a digitally encoded notification message followed by an audio transmission (only) of the president's message. The EAN will be received by State Emergency Operations Center, the Primary

Entry Point (PEP) source for the State of Hawaii and is required by Federal law to be automatically relayed through local broadcasters without delay.

a) Under federal law participating stations must carry presidential messages live at the time of transmission. An EAN will automatically preempt normal programming. During a national emergency, the radio and TV broadcast network program distribution facilities are reserved exclusively for distribution of presidential messages.

b) FCC rules have established the following message priorities upon a National Level activation of the alert system:

- Presidential (National) messages
- Local Area messages
- State messages

c) The EAS encoder/decoder must be installed in the audio chain between the station console/audio sources and the transmitter. This allows an EAS activation to go on the air automatically, overriding station programming. When the National Level EAS is no longer needed, an Emergency Alert Termination (EAT) order will be transmitted to release control of the National EAS Network.

2. State\Local Level

May be activated by either of the following agencies in response to a potentially hazardous condition that poses a threat to the safety of life and/or property:

a) State/Local Emergency Management authorities may utilize the IPAWS system to disseminate locally coordinated information and instructions such as:

- (1) Imminent Civil Danger
- (2) Impending Civil Emergencies
- (3) Evacuation Orders
- (4) Sheltering Information
- (5) Government Facility Closures
- (6) Road and/or Highway Closures
- (7) Critical Communications Outage
- (8) Wildland Fire
- (9) Flooding and/or mudslides
- (10) Other items as the situation requires

Coordinated use of the outdoor siren warning system with the IPAWS will occur as required.

b) County Police Chief or his/her designee and the State AMBER/MAILE Coordinator from the State Attorney General's Office or his/her designee may also activate IPAWS upon

determination that imminent danger exists to pose a threat to the safety of life and/or for law enforcement incidents/events.

In the event of an erroneous IPAWS activation on EAS and/or WEA, the subsequent corrective alert must utilize the same event code as the original activation to ensure the same audience is alerted.

3. National Weather Service (NWS)

NWS will issue advisories, watches and warnings when adverse weather conditions are expected to impact all or a portion of the state. The NWS in Hawaii operates the local portion of the NOAA Weather Radio (VHF) system and generates Specific Area Message Encoding messages (SAME) for required events. SAME encoded messages use common protocols and event codes with the EAS, so that any SAME message will be decoded by EAS encoders/decoders at all broadcast/cable provider locations. Only those SAME encoded messages listed in Attachment B are to be programmed to activate the EAS. Broadcasters/providers are responsible for the accuracy of these codes within their encoder/decoders.

NOAA Weather Radio (SAME messages) is the NWS access point to the EAS. This allows the NWS to activate the EAS.

For local earthquakes occurring in the Hawaiian Islands magnitude 5.0M and higher, where Pacific Tsunami Warning Center (PTWC) has determined that no damaging tsunami is expected, NWS will manually generate an Administrative Message (ADR) EAS system activation to notify the public that no tsunami is expected. This will be based on the PTWC Tsunami Information Bulletin which details the evaluation that no tsunami was generated. If the earthquake has generated or expected to have generated a damaging tsunami, a Tsunami Warning (TSW) event code activation of the EAS will preclude the need for an NWS generated ADR.

EAS activation by the NWS will provide the public and authorities with initial notification of a watch or warning status. For warnings of locally generated tsunamis, the NWS may repeat as necessary the EAS activation until the event is cancelled and/or the threat has cleared.

B. Broadcasters Responsibilities

Emergency Management authorities will alert the public of impending danger via one or more of the Hawaii Statewide Alert & Warning Systems. Participating stations and cable operators are required to monitor the digitally coded messages transmitted through State/Local authorities and alert their audiences accordingly.

Participation of State/Local EAS activations shall not be deemed as a relinquishment of program control and shall not be deemed to prohibit a broadcast licensee from exercising his independent discretion and responsibility in any given situation. Broadcast stations and cable systems passing EAS emergency communications shall be deemed to have conferred rebroadcast authority.

1. As required by the FCC, be equipped with authorized EAS encoders and decoders properly configured to either store or automatically transmit EAS messages for each FCC specified event code. Assistance to initially configure EAS equipment is available upon request from HI-EMA Telecommunications Branch; phone 808-733-4300.
2. All radio broadcast stations are required to monitor at least two (2) local EAS sources in addition to the IPAWS Common Alerting Protocol (CAP) internet feed. See Appendix C.
3. The EAS Operating Handbook summarizes the actions to be taken by personnel at EAS Participant facilities upon receipt of an EAN, Tests, or Federal\State\Local area alerts. A copy of the Handbook must be located at normal duty positions or EAS equipment locations.
4. Upon activation of the EAS:
 - (1) Local Primary sources are required by this State Plan to broadcast all EAS activation messages per instruction in Appendix A & B. This State Plan contains three categories for decoder event codes.
 - (a) One category is an AUTOMATIC FORWARD and broadcasters are recommended to transmit the EAS alert immediately as they warn of imminent danger affecting life and property. It is important that broadcasters utilize the immediate AUTOMATIC FORWARD codes listed in this State Plan as Federal\State\Local authorities need to be confident the information provided is reaching the public in a timely manner
 - (b) The second category is LOG ONLY. These alerts are not to be forwarded. These codes are for testing only and deemed not imminent to the safety of life or property.
 - (c) The 3rd category is MANUAL FORWARD. It is recommended these specified alert types be carried when practical to ensure public situational awareness of the indicated natural hazard.
 - (2) Stations that provide foreign language programming may transmit emergency announcements in the foreign language. TV broadcast stations shall transmit all announcements visually and orally.
 - (3) TV stations and cable operators must carry "crawlers" to alert hearing impaired viewers and carry embedded audio messages contained in any EAS alert activation.

- (4) Resume normal broadcast operations upon transmission of the alert message.

III. TESTING

The FCC mandates certain required weekly and monthly EAS testing while the State strongly encourages participation in coordinated monthly tests of the Live Audio/Video Broadcast system components. The following test apply to all participating cable operators and all broadcasters.

A. Broadcaster Testing

1. Broadcaster Required Weekly Test (RWT)

All broadcast stations are required to initiate a RWT each week. This will be performed on random days at unannounced times except for the week of the monthly test. There are no time-of-day restrictions. This is a 10.5-second test consisting only of the EAS header and end-of-message codes.

B. National Weather Service Testing

1. Broadcaster Required Weekly Test (RWT)

The NWS also generates a SAME encoded RWT messages. This test, conducted each Wednesday between 11:00 a.m. and 12:00 p.m., is designed to verify that the NOAA Weather Radio SAME receiver/decoders available to the public are working, as well as verify EAS connectivity from NWS to broadcasters and cable providers. During significant weather and/or when the test falls on the State's Required Monthly Test day, the test will be postponed until the next day.

C. State\Local Testing

1. Required Monthly Test (RMT)

Monthly tests of the EAS system encoders/decoders will be initiated by Emergency Management monthly as required by the FCC. This test will occur at 11:15 a.m. on the first workday of each month. While FCC guidelines instruct broadcasting entities receiving the RMT to retransmit within 60 minutes, this State Plan request that broadcasters immediately forward the RMT. Times are required to be logged for both the receipt and retransmission of the RMT test.

2. Monthly Test of LABS & LVBS

Monthly test of the LABS and LVBS will be conducted at 11:45 a.m. on the first workday of each month. Broadcasters and cable providers are recommended to air the live feeds generated by emergency management authorities. TV operating facilities capable of airing the live video feed disseminated via UH Network are requested to broadcast this video during the 11:45 a.m. test. Emergency Management authorities will provide participating stations by closed circuit announcement with a 2-minute countdown to broadcast.

D. Wireless Emergency Alert Testing

As of May 2019, State\Local alerting authorities are authorized to send Wireless Emergency Alert Test Messages. Hawaii Emergency Management Agency is reviewing a new testing schedule and will determine an implementation plan.

AGREED

TSW	Tsunami Warning	X	

VI. APPENDIX C – FIPS, Monitoring Sources, RPU, LPs

A. EAS FIPS County Code.

The Federal Information Processing Standard (FIPS) is a code which uniquely identifies state and counties in the United States.

1. ALL STATE	#015000
2. HONOLULU COUNTY	#015003
3. MAUI COUNTY	#015009
4. KAUAI COUNTY	#015007
5. HAWAII COUNTY	#015001
6. KALAWAO COUNTY	#015005

B. Available Monitoring Sources

All broadcast stations are being required to monitor at least two (2) local EAS sources in addition to the NOAA Weather Radio & the IPAWS Common Alerting Protocol (CAP) internet feed. See Appendix E for specific monitor assignments.

Local Sources Available

- (1) Local Primary 1 (LP1)
- (2) Local Primary 2 (LP2)
- (3) State HI-EMA Wireline (available for local primaries only)
- (4) State HI-EMA "Remote Pickup Unit" (RPU) VHF Radio Signal

Other

- (5) IPAWS CAP Internet Feed
- (6) NOAA Weather Radio

C. RPU Locations

The Remote Pickup Units (RPU) are VHF Radio Transmitters situated on each main island to allow broadcasters an alternate wireless EAS source.
